He first took up architecture, but his natural taste soon led him into the working of metals, and he secured a situation in the Springfield Armory, where he remained a number of years. Through the influence of his brother-in-law, Mr. Stratton, he secured a situation with Dennison, Howard and Davis in 1853, where he first worked on fitting trains and was afterwards given steel work, such as regulators, hair spring studs and what is termed flat steel work generally. In the making of regulators, great difficulty was experienced in securing flatness during the tempering, and Mr. Shepard introduced a system of straightening by pressure while the temper was being drawn. He also introduced the use of pulverized Arkansas oil stone for grinding purposes, which proved far better than any grinding powder that has ever been used. Mr. Shepard moved with the company in...
