

## Psychology and the School (Classic Reprint) (Paperback)

By Edward Herbert Cameron

Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*. Excerpt from Psychology and the School Specialization of functions. In the unicellular animals all these functions are performed by one cell. But the multicellular animals are made up of different kinds of cells, each with its special function. The cells that are specialized for contractility form in the aggregate the muscular system Of higher animals. The cells that are specialized for sensitivity are distributed for the most part over the surface of the body, and in some cases take the highly specialized forms of sense-organs. The cells that are specialized for conductivity taken together form the nervous system, and serve to connect the sensitive cells with the contractile (muscular) cells. The higher in the scale of animal evolution, the more numerous and highly specialized these cells become, and the behavior is correspondingly more varied. All of this development is clearly for the purpose of better adaptation of the animal to its environment.
