We can only know the probable position and momentum of a particle. Investing in an individual stock means you are predicting where its price (position) will be in the future. You are betting that it will reach that price within a given time (momentum). Unless you have insider information, you are really gambling. No one can know a stock s position and momentum in the future. Just like in physics, there is no way to know you ll be in the money in time. Stocks aren t particles, but the analogy holds. We only know where a bunch of particles, like electrons of a charge, are likely to be at a given time. In the same way, we can know only where a bunch of stocks will probably be in the future. In this world, probabilities are the only certainty we have. We are much more likely to earn more in a bunch of stocks than in just one stock over time. Timing is everything. It is more likely that a bunch of stocks will average over 10 for almost every period greater than 5 years. The odds favor this strategy.
