

Earthquake Processes: Physical Modelling, Numerical Simulation and Data Analysis Part I

By -

Birkhauser. Paperback. Book Condition: New. Paperback. 264 pages. Dimensions: 9.4in. x 6.5in. x 0.7in. In the last decade of the 20th century, there has been great progress in the physics of earthquake generation; that is, the introduction of laboratory-based fault constitutive laws as a basic equation governing earthquake rupture, quantitative description of tectonic loading driven by plate motion, and a microscopic approach to study fault zone processes. The fault constitutive law plays the role of an interface between microscopic processes in fault zones and macroscopic processes of a fault system, and the plate motion connects diverse crustal activities with mantle dynamics. An ambitious challenge for us is to develop realistic computer simulation models for the complete earthquake process on the basis of microphysics in fault zones and macro-dynamics in the crust-mantle system. Recent advances in high performance computer technology and numerical simulation methodology are bringing this vision within reach. The book consists of two parts and presents a cross-section of cutting-edge research in the field of computational earthquake physics. Part I includes works on microphysics of rupture and fault constitutive laws, and dynamic rupture, wave propagation and strong ground motion. Part II covers earthquake cycles, crustal deformation, plate dynamics, and seismicity...

Reviews

Very good eBook and valuable one. This is for anyone who states that there was not a worth reading. You will not truly feel monotony at any time of your own time (that's what catalogs are for concerning if you question me).

-- **Ms. Ona Muller**

The most effective publication I at any time go through. This is certainly for all those who state that there had not been a worthy of looking at. Its been printed in an extremely straightforward way which is merely soon after I finished reading this publication where basically changed me, change the way in my opinion.

-- **Madyson Rutherford**
