

## Life-Time Estimation of Modern Power Electronics Devices

Filesize: 7.13 MB

### **Reviews**

*Good electronic book and valuable one. It generally is not going to charge an excessive amount of. Its been developed in an remarkably straightforward way and is particularly simply following i finished reading this ebook through which really transformed me, change the way i think.*

*(Mr. Domenic Eichmann)*

## LIFE-TIME ESTIMATION OF MODERN POWER ELECTRONICS DEVICES

[DOWNLOAD PDF](#)

Condition: New. Publisher/Verlag: Noor Publishing | Power cycling capability of advanced packaging and interconnection technologies at high temperature swings | Due to the increasing advancements in power devices, especially in Insulated Gate Bipolar Transistors (IGBT) technology, switching of kV and kA within mis is possible. Thereby a dissipation power up to 400W per chip is generated. Compared to the switched power, the dissipated power is still marginal. However, considering the area within this power is generated ( 2cm<sup>2</sup>), a significant heat density and thus high temperature especially within the chip is generated. To keep the maximal junction temperature ( $T_{j,max}$ ) within the allowed range, reliable, thermally convenient packaging and interconnection concepts are necessary. Furthermore, power devices find increasingly application in automobile industry, where they have to fulfil high reliability requirements under harsh environmental conditions during their service lifetime of approx. 15 years. | Format: Paperback | Language/Sprache: english | 136 pp.
