Formerly students were taught chemistry in the lecture-room, the knowledge so gained being supplemented by a minimum amount of practical work, and that almost exclusively analytical The tendency of the present day is to make the student, from the very beginning, an investigator; to train and develop his faculties for observation; to make him find out facts and discover truths for himself; in other words, to make him think instead of merely committing to memory what others have thought. I have therefore endeavoured, as far as it is possible to do so in a text-book, to fall into line with these views. In actual practice the purely inductive method of instruction breaks down. There is so much that the student is required to learn, that life itself is not long enough, and certainly the limited time at the disposal of the student is all too short,...
