

Software Technologies for Embedded and Ubiquitous Systems: 6th IFIP WG 10.2 International Workshop, SEUS 2008, Anacapri, Capri Island, Italy, October 1-3, 2008 Revised Papers

Springer. Paperback. Condition: New. 432 pages. Dimensions: 9.1in. x 6.1in. x 1.0in. Embedded and ubiquitous computing systems have considerably increased their scope of application over the past few years, and they now also include mission- and business-critical scenarios. The advances call for a variety of compelling issues, including dependability, real-time, quality-of-service, autonomy, resource constraints, seamless interaction, middleware support, modeling, verification, validation, etc. The International Workshop on Software Technologies for Future Embedded and Ubiquitous Systems (SEUS) brings together experts in the field of embedded and ubiquitous computing systems with the aim of exchanging ideas and advancing the state of the art about the above-mentioned issues. I was honored to chair the sixth edition of the workshop, which continued the tradition of past editions with high-quality research results. I was particularly pleased to host the workshop in the wonderful scenario of Capri, with its stunning views and traditions. The workshop started in 2003 as an IEEE event, and then in 2007 it became a flagship event of the IFIP Working Group 10.2 on embedded systems. The last few editions, held in Hakodate (Japan), Vienna (Austria), Seattle (USA), Gyeongju (Korea), and Santorini (Greece), were co-located with the IEEE International Symposium on Object Component Service-Oriented Real-Time Distributed Computing (ISOS/OCS/OOTD).
