THERMAL PARTIAL OXIDATION AND SOOT FORMATION IN POROUS INERT MEDIA

Shaker Verlag Mrz 2014, 2014. Buch. Condition: Neu. Neuware - This thesis investigates the production of syngas from rich methane / air mixtures. The examined process is based on partial oxidation that was experimentally carried out without the use of catalysts. In order to overcome technical difficulties arising from catalyst exclusion, the process was studied using porous media based reactors. The employed porous media are inert ceramic materials, which promote internal heat recirculation within the reaction zone and consequently, superadiabatic...
