Excerpt from Reflex Paralysis: Its Pathological Anatomy, and Relation to the Sympathetic Nervous System The generic term *reflex*, used here, comprises that peculiar and extensive class of paralyzes called functional, idiopathic, asthenic, and peripheral. It may be proper to state from the beginning that this name does not imply contraction in the blood vessels of the spinal cord as a necessary initial cause of the paralysis, nor subsequent absence of structural change in the nervous system as its effect. I keep the word, because there is no advantage in coining a new one when that already created suffices, provided we define its meaning to guard against looseness of application. Indeed, there should be no objection to call such form of paralysis *reflex*, for several of its varieties attending fever, pneumonia, anæmia, intoxication, etc., could not properly be looked upon as peripheral, in the true sense of this expression; while to name them functional is obviously in opposition to our knowledge that material modification in the organs is essential to disease. Therefore, as already intimated, disregarding the idea of vascular contraction and absence of lesion in the spinal cord - certainly not conveyed by the term *reflex* - this.
