Such a transition would require a continual correction, amounting, in fact, to the process of the last article: but tan-1tanj; is, by definition, the angle which lies between--it and + g, and has x for its tangent. The student should now prove the following theorems, illustrative of the limitation of F 1, as distinguished from F i. T = 3-14159265352 which is correct, with the exception of the last place. all similar equations, and explain under what limitations they are true. It must be observed that every such equation becomes true (134.) when sin i, c. are substituted for sin-1, c. But it does not follow that the same value of m in the general equation sin ia: = 2ffl + sin lx = (2m + l)5r--sin-1a; must be applied on both sides of the equation. (150.) The angle sin-1 is made, by convention, a periodic angle. It changes through 0, -, 0, --, 0, c. while x changes through 0, 1, 0, --1,0, c. If x be greater than 1, the angle sin , i becomes impossible. If in the expressions for sini and cosx, we write xs/--1 for x, we have 2 Vi---i !----coshes/--l)The right hand sides of the equations are no longer periodic; and in - the same way as all functions of sines, cosines, c. may be expressed by exponential functions of x and./--1, so all exponential functions may be...
