*Thorough guideline! Its this type of good read. It is really simplistic but shocks from the 50 percent from the publication. It is extremely difficult to leave it before concluding, once you begin to read the book.*

Brand New Book. Excerpt from Experimental Study of the Relation Between Intermittent and Nonintermittent Sector-Wheel Photographic Exposures All plates were of the commercial 5 by 7 inch size. These were cut in one operation, by a special plate - cutting machine, into seven parts, giving five which are 1-33 - 2 by 5 inches, the two end strips being discarded. The plates after cutting are removed intact - that is, not broken apart - painted on the glass side with a black shellac mixture to prevent halation, and then drieifl in a ventilated closet. After drying they are broken apart and loaded into the plate holders, each having three pockets. In all experiments three kinds of plates were exposed in each holder; for example, A plates in the upper pocket, B plates in the center pocket, and 0 plates in the lower pocket. Since practically every experiment was made with eight holders, this gave 24 test specimens for each designated experiment.
