

Proceedings of the Pathological Society of Philadelphia, Vol. 6: April, 1903 (Classic Reprint) (Paperback)

By Pathological Society of Philadelphia

Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Proceedings of the Pathological Society of Philadelphia, Vol. 6: April, 1903 I have made an effort to avoid the use of these indicators, and in their stead have substituted the spectroscope, neutralizing the alkaline principles of the blood by means of an acid, namely, tartaric acid. If we take a given volume of blood, and titrate with a standard solution of tartaric acid, it can be definitely shown by means of the spectroscope that the characteristic absorption bands of oxyhemoglobin, methemoglobin, and carbon monoxid hemo globin disappear the very instant the alkaline reaction of the blood is neutralized. To prove that this reaction is due to the blood s alkalinity and not to the quantity of hemoglobin present, it is only necessary for us to resort to the device of varying the degree of alkalinity by the addition of dilute solutions of phosphoric acid or disodium phosphate, repeating the tests and comparing results. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten...

Reviews

It in just one of my personal favorite publication. It is among the most awesome publication i have read. It is extremely difficult to leave it before concluding, once you begin to read the book. -- Delia Rutherford

This is actually the greatest pdf i actually have read until now. it absolutely was writtern really properly and beneficial. Your life period will be change when you complete looking over this pdf. -- Lurline Little
