

## Proceedings of the Chemical Society Volume 8

Filesize: 8.18 MB

### ***Reviews***

*This publication is very gripping and exciting. Better than ever, though I am quite late in starting to read this one. I am very happy to inform you that here is the finest PDF I actually have read in my very own daily life and could be the greatest publication for actually.*

DOWNLOAD

To save **Proceedings of the Chemical Society Volume 8** eBook, please follow the link listed below and download the document or have accessibility to other information which are in conjunction with PROCEEDINGS OF THE CHEMICAL SOCIETY VOLUME 8 book.

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 96 pages. Dimensions: 9.7in. x 7.4in. x 0.2in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1894 Excerpt: . . . prepared from parabromophenol and sulphuryl chloride, crystallises from light petroleum in silky needles melting at 66T5; it gives metadichloroquinone when treated cold with nitric acid (15), and a mixture of dichloroparanitrophenol (m. p. 125) and chlororthoparadinitrophenol (m. p. 110--111) when warmed with nitric acid in glacial acetic acid solution. Metachlorobromoquinone O2: Cl: Br 1: 4: 2: 6, prepared by adding chlorodibromophenol OH: Cl: Br 2 1: 2: 4: 6 to cooled nitric acid (15), crystallises from alcohol in yellow needles melting at 114--115. The quinol melts at 154--155. Iaradichlorobromoquinone O2: Ch. : Br 1: 4: 2: 5: 6, obtained by brominating paradichloroquinone (m. p. 161), melts at 160--161. The quinol crystallises from water in monohydrated needles melting at 124--126; the anhydrous substance melts at 1355. The diacetyl derivative melts at 158--159. Metadihromochloroquinone O2: Cl2: Br 1: 4: 2: 6: 5, produced by brominating metadichloroquinone (m. p. 121), melts at 168. The quinol crystallises from water in anhydrous needles melting at 135, its diacetyl derivative melting at 173--174. Paradichloroquinone does not yield metadichlorodibromoquinone on bromination, as stated by Hantzsch and Schniter, but the normal product--paradichlorodibromoquinone--is obtained. Paradichlorodibromoquinone O2: Cl2: Br 2 1: 4: 2: 6: 3: 5, produced in this way, forms six-sided plates melting at 292; the quinol melts at 235--236, its diacetyl derivative melting at 269--270. The quinone does not yield chlorobromanilic acid on treatment with alkali, as Levy has stated, but a compound consisting of 1 mol. proportion of chloranilate and 2 mol. proportions of bromanilate....
