Forgotten Books, United States, 2016. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Formulas and Constants for Gas Engine Design Motors of any type - gasoline, electric or steam - are compromises from beginning to end; we cannot design any one part to obtain the theoretically best results from it without interference with some other feature. With the gasoline engine there are certain advantages in a short stroke, but in the short-stroke motor we also meet with many objections. This same condition applies to the number of cylinders and their mounting (horizontal, vertical or oblique), to the casting en bloc or individually, and to the amount of compression. In many cases the best results can only he arrived at by actual cut-and-try experiments, and it is, therefore, not possible to give any definite figures except for purposes of illustration. The suggestions given are based upon an extensive experience with automobile and marine engines. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
