

Development and characterization of biodegradable Fe-based alloys

Filesize: 8.66 MB

Reviews

Very good electronic book and valuable one. It is actually written in basic words instead of difficult to understand. I discovered this ebook from my i and dad encouraged this publication to discover.
(Prof. Jevon Frami)

DEVELOPMENT AND CHARACTERIZATION OF BIODEGRADABLE FE-BASED ALLOYS

[DOWNLOAD](#)

Condition: New. Publisher/Verlag: Südwestdeutscher Verlag für Hochschulschriften | for temporary medical implant applications | Iron and its alloys are currently evaluated for use as biodegradable materials for temporary medical implants. The concept of a metallic implant that degrades within the human body has become increasingly accepted in recent years. If the material degraded in the body while the tissue recovered implant removal would become obsolete. Fe is a promising candidate as a degradable implant material. This work develops a design strategy which takes into account electrochemical, microstructural and toxicological aspects. The aim is to find alloys whose performance is suitable for implant applications, in terms of both degradation rate and high strength and ductility. The austenitic high-Mn alloys developed in the study possess an impressive combination of high ductility, simultaneously high strength levels and a pronounced strain hardening response. Degradation properties were evaluated by means of immersion testing and electrochemical impedance spectroscopy in physiological media. In vitro cytocompatibility studies were performed by means of indirect cell tests using extracts from the alloys. The overall performance of the alloys developed and characterized in this study is very promising. | Format: Paperback | Language/Sprache: english | 196 pp.
