## High Speed Transceiver for Video Applications

By P. D. Rateesh

LAP Lambert Academic Publishing. Paperback. Condition: New. 104 pages. Dimensions: 8.7in. x 5.9in. x 0.2in. High speed data applications such as High-definition video streaming, Gigabit transmission always pose serious challenges to designers through stringent bandwidth, noise and power requirements. HD-video standards such as DVI and HDMI require gigabit data rate communication to support high resolution and sophisticated coding associated with them. However, clock signal sending in these transmission prove to be a bottleneck in achieving higher resolution. This book discusses the methods like serial interfacing, differential signalling and clock recovery techniques to power optimize high speed transmission interface designs for the video applications. This work emphasizes upon achieving signal noise immunity, low power transmission, by carrying out low power implementations at system as well as sub-block level of design. The proposed transceiver implementation is carried out in a bottom-up approach with full-custom design flow using 0.18 μm CMOS technology. The analysis presented in this book would shed some light upon design methods of high speed CMOS circuits and loop stabilized systems and should prove useful to the practitioners in Mixed-signal VLSI design. This item ships from multiple locations. Your book may arrive from Roseburg, OR, La Vergne, TN. Paperback.

### Reviews

*Complete guideline for pdf lovers. It is definitely basic but shocks within the 50 percent of your ebook. I am easily could get a pleasure of studying a created publication.*

-- Prof. Elwyn Boehm MD

*Complete information for pdf fans. It had been written quite perfectly and helpful. You can expect to like how the article writer compose this ebook.*

-- Jack Hirthe
