

Isotropic, Anisotropic, and Borehole Washout Analyses in Gulf of Mexico Gas Hydrate Joint Industry Project Leg II, Alaminos Canyon Well 21-A: Usgs Scientific Investigations Report 2012-5046

Filesize: 4.77 MB

Reviews

Definitely one of the better ebook I have possibly read through. It usually will not charge excessive. You wont feel monotony at anytime of your own time (that's what catalogues are for regarding if you check with me).

ISOTROPIC, ANISOTROPIC, AND BOREHOLE WASHOUT ANALYSES IN GULF OF MEXICO GAS HYDRATE JOINT INDUSTRY PROJECT LEG II, ALAMINOS CANYON WELL 21-A: USGS SCIENTIFIC INVESTIGATIONS REPORT 2012-5046

To get **Isotropic, Anisotropic, and Borehole Washout Analyses in Gulf of Mexico Gas Hydrate Joint Industry Project Leg II, Alaminos Canyon Well 21-A: Usgs Scientific Investigations Report 2012-5046** eBook, make sure you access the web link under and save the file or gain access to other information which might be relevant to ISOTROPIC, ANISOTROPIC, AND BOREHOLE WASHOUT ANALYSES IN GULF OF MEXICO GAS HYDRATE JOINT INDUSTRY PROJECT LEG II, ALAMINOS CANYON WELL 21-A: USGS SCIENTIFIC INVESTIGATIONS REPORT 2012-5046 ebook.

Bibliogov, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.Through the use of three-dimensional seismic amplitude mapping, several gas hydrate prospects were identified in the Alaminos Canyon area of the Gulf of Mexico. Two of the prospects were drilled as part of the Gulf of Mexico Gas Hydrate Joint Industry Program Leg II in May 2009, and a suite of logging-while-drilling logs was acquired at each well site. Logging-while-drilling logs at the Alaminos Canyon 21-A site indicate that resistivities of approximately 2 ohm-meter and P-wave velocities of approximately 1.9 kilometers per second were measured in a possible gas-hydrate-bearing target sand interval between 540 and 632 feet below the sea floor. These values are slightly elevated relative to those measured in the hydrate-free sediment surrounding the sands. The initial well log analysis is inconclusive in determining the presence of gas hydrate in the logged sand interval, mainly because large washouts in the target interval degraded well log measurements. To assess gas-hydrate saturations, a method of compensating for the effect of washouts on the resistivity and acoustic velocities is required. To meet this need, a method is presented that models the washed-out portion of the borehole as a vertical layer filled with seawater (drilling fluid). Owing to the anisotropic nature of this geometry, the apparent anisotropic resistivities and velocities caused by the vertical layer are used to correct measured log values. By incorporating the conventional marine seismic data into the well log analysis of the washout-corrected well logs, the gas-hydrate saturation at well site AC21-A was estimated to be in the range of 13 percent. Because gas hydrates in the vertical fractures were observed, anisotropic rock physics models were also applied to estimate gas-hydrate saturations.
