## National Institute of Child Health, Annual Report of Intramural Research: October 1, 1987 Through September 30, 1988 (Classic Reprint) (Paperback)

By U S Dept of Health and Huma Services

Forgotten Books, 2016. Paperback. Condition: New. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*. Excerpt from National Institute of Child Health, Annual Report of Intramural Research: October 1, 1987 Through September 30, 1988 Summary OF work (use standard uneduced type. 00 not exceed the space provided.) The cells of higher eukaryotes acquire iron via the serum protein transferrin (tf) and a high-affinity cell surface transferrin receptor (tfr). The expression of the tfr is highly regulated (greater than 20-fold) by iron availability with higher levels of expression -occurring when iron is scarce. The regulation of the expression of the tfr is achieved by modulation of the level of the mrna encoding the receptor. At least two genetic loci were found to participate in this regulation of tfr mma levels. A modest (2 to 3-fold) transcriptional regulation was found to be mediated by human genomic dna 5 of the transcription start site. We have molecularly cloned and partially characterized the promoter of the human tfr gene. However, the tfr cdna even when driven by a heterologous promoter remains highly regulated by iron. The tfr mma is 5 kb in length of which approximately half is the 3 untranslated region...

### Reviews

*Basically no phrases to clarify. It really is written in straightforward phrases rather than hard to understand. You will not sense monotony at any moment of your own time (that's what catalogues are for concerning if you ask me).*

-- Doris Beier

*This pdf can be well worth a read, and much better than other. I am quite late in start reading this one, but better then never. Your daily life span will probably be transform when you full looking over this book.*

-- Roxanne Stehr
