Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from The Microbe-Producing-Disease Theory: Inconsistent With the Laws of Nature; How Diseases Are Produced; A New Physiological Law Promulgated I. In order to avoid repetition and for the sake of shortness, the word Microbe shall include all that are at present considered as microbial vital beings, such as those that can only be seen under the microscope, for instance, Schizomycetes, Schizophyta, Microphytes, Micrococci, Bacilli, Spirilli, Bacteria, Leptothrix, Vibriones, Staphylococci, Clostridium, Beggiatoa, Spiromonas, Spirochaete, Cladothrix, and all those that have received no name as yet, as well as those that are too small to be seen under the most powerful microscope. If one of these names actually includes any other, or if one is a derivation from another, matters not; the question 1st is: What is a microbe? Of course, the bacteriologist may say: A microbe is a minute vital organism which can be seen only under the microscope. But, such a definition is, to say the least, not very precise and not a little evasive; for, one having a microscope of a power say 250 can claim that he sees microbes. Another who has a microscope of a power of 1000 can see other microbes. Another still with a power yet higher might claim to see more and other microbes. Where then is the limit to our observation and who can assign it? That there are creatures beyond the range or power of any of our optical contrivances to detect, is, I might say, certain; just as certain as that there are stars in the heavens beyond the range of our most powerful telescopes. Shall we then leave these creatures un-named, or shall we not classify...
