Excerpt from An Agency Theory View of the Management of End-User Computing The dramatic decline in the costs of hardware and the trend towards the increased power of microcomputers and minicomputers have enabled significant growth in end-user computing (buc). This trend has implications not only for the management of buc but also for the degree of centralization of the Information Systems (is) function in organizations. Therefore, there has been increased focus on the organizational issues surrounding buc, as evidenced by senior IS executives responses in several recent surveys.<sup>1</sup> Management issues related to decentralization of the IS department also ranked high on their list of concerns.
