

Recent Trends in Gene Expression

By Subhrangsu S. Mandal

Nova Science Publishers Inc. Hardback. Book Condition: new. BRAND NEW, Recent Trends in Gene Expression, Subhrangsu S. Mandal, The term Gene refers to a segment of DNA present inside the genome that code for a protein. Depending on the organism, a particular genome may encode thousands of diverse types of genes responsible for various functions. These genes are differentially expressed and tightly regulated as needed at different stages of cell and physiological functions including cell differentiation and development. Gene expression may be influenced by various environmental and stimuli such as temperature, nutrients, hormones, stress etc. Though the fundamental mechanism of transcription (production of mRNA from the protein coding genes) is very similar in different organisms, the mechanism of gene regulation and the machineries involved are distinct for different organisms. In the post genomic and epigenomic era, it is increasingly being recognized that gene expression is not only controlled gene sequences but also various other non-genomic factors that include protein and DNA modifications and non-coding RNAs. Various aspects of gene expression in prokaryotes and eukaryotes, the mechanism of transcription and gene regulation and influences of various environmental factors are highlighted in different chapters of this book.

Reviews

Very helpful to all of group of men and women. It can be written in easy terms instead of confusing. You will like how the writer write this book.
-- **Dr. Daren Mitchell PhD**

I actually started out looking at this publication. it was actually writtern really perfectly and useful. Its been written in an extremely simple way and it is only soon after i finished reading through this pdf by which really modified me, change the way i really believe.
