It has been revised to meet the especial needs of students in Columbia College who are preparing for admission to the graduate schools of Mines, Engineering and Chemistry of Columbia University, and for those majoring in the natural sciences and in particular in physics and chemistry. The exercises were selected to emphasize those important fundamental principles and concepts in physics that are of vital importance to a clear understanding of the scientific and engineering courses that follow. They are, at the same time, well adapted to afford an excellent means of training the student in the handling of delicate apparatus, and in the correct methods of observing and recording data, of estimating the accuracy of the measured quantities and of preparing adequate reports, - matters of large importance in a correct experimental procedure in testing and in research laboratories. They also serve as an introduction to the leading books and tables of reference which are so indispensable in later work.
