Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from The Bulletin, Vol. 7: North Central Region; June 1935 We must indeed, use our ingenuity in deciding if and how we shall replace most of the present hardwood reproduction With a stronger stand of deciduous growth. However, first let us see in what way nature provided for the possibilities of good reproduction. Then we shall try to see where she ceases to guide the destinies of the forest and hands the reins to us. Nearly all the species sprout well from the stump whether they are cut in seedling or sapling stage. Even though fire enters in as an unfavorable factor, killing off the tops, young growth will come up from the roots. The oak and hickory species sprout especially well in this respect. Oak and hickory regenerate well by seed-particularly under old stands which are more or less open. So all in all, the question of keeping the forest productive is well taken care of by nature.
