

Daycent-Chem Simulations of Ecological and Biogeochemical Processes of Eight Mountain Ecosystems in the United States: Usgs Scientific Investigations

Filesize: 4.66 MB

Reviews

This type of book is every thing and made me seeking forward and more. It is amongst the most awesome publication we have go through. Its been developed in an exceptionally straightforward way and it is only soon after i finished reading this ebook by which actually altered me, alter the way i believe.

(Mrs. Serena Wunsch)

DAYCENT-CHEM SIMULATIONS OF ECOLOGICAL AND BIOGEOCHEMICAL PROCESSES OF EIGHT MOUNTAIN ECOSYSTEMS IN THE UNITED STATES: USGS SCIENTIFIC INVESTIGATIONS

To read **Daycent-Chem Simulations of Ecological and Biogeochemical Processes of Eight Mountain Ecosystems in the United States: Usgs Scientific Investigations** eBook, remember to access the button under and download the ebook or have accessibility to additional information which are relevant to DAYCENT-CHEM SIMULATIONS OF ECOLOGICAL AND BIOGEOCHEMICAL PROCESSES OF EIGHT MOUNTAIN ECOSYSTEMS IN THE UNITED STATES: USGS SCIENTIFIC INVESTIGATIONS ebook.

Bibliogov, United States, 2011. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.Atmospheric deposition of nitrogen (N) and sulfur (S) cause complex responses in ecosystems, from fertilization to forest ecosystem decline, freshwater eutrophication to acidification, loss of soil base cations, and alterations of disturbance regimes. DayCent-Chem, an ecosystem simulation model that combines ecosystem nutrient cycling and plant dynamics with aqueous geochemical equilibrium calculations, was developed to address ecosystem responses to combined atmospheric N and S deposition. It is unique among geochemically-based models in its dynamic biological cycling of N and its daily timestep for investigating ecosystem and surface water chemical response to episodic events. The model was applied to eight mountainous watersheds in the United States. The sites represent a gradient of N deposition across locales, from relatively pristine to N-saturated, and a variety of ecosystem types and climates. Overall, the model performed best in predicting stream chemistry for snowmelt-dominated sites. It was more difficult to predict daily stream chemistry for watersheds with deep soils, high amounts of atmospheric deposition, and a large degree of spatial heterogeneity. DayCent-Chem did well in representing plant and soil carbon and nitrogen pools and fluxes. Modeled stream nitrate (NO₃⁻) and ammonium (NH₄⁺) concentrations compared well with measurements at all sites, with few exceptions. Simulated daily stream sulfate (SO₄²⁻) concentrations compared well to measured values for sites where SO₄²⁻ deposition has been low and where SO₄²⁻ adsorption/desorption reactions did not seem to be important. The concentrations of base cations and silica in streams are highly dependent on the geochemistry and weathering rates of minerals in each catchment, yet these were rarely, if ever, known. Thus, DayCent-Chem could not accurately predict weathering products for some catchments. Additionally, few data were available for exchangeable soil cations or...
