

Petroleum Geology and Resources of the West Siberian Basin, Russia: Usgs Bulletin 2201-G

Filesize: 9.32 MB

Reviews

A whole new e book with a brand new point of view. I could possibly comprehend every thing using this written e book. Its been written in an extremely simple way which is only soon after i finished reading through this ebook by which actually modified me, change the way in my opinion.

PETROLEUM GEOLOGY AND RESOURCES OF THE WEST SIBERIAN BASIN, RUSSIA: USGS BULLETIN 2201-G

To get **Petroleum Geology and Resources of the West Siberian Basin, Russia: Usgs Bulletin 2201-G** PDF, make sure you follow the web link under and save the document or gain access to other information which are related to PETROLEUM GEOLOGY AND RESOURCES OF THE WEST SIBERIAN BASIN, RUSSIA: USGS BULLETIN 2201-G ebook.

Bibliogov, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.The West Siberian basin is the largest petroleum basin in the world covering an area of about 2.2 million km². The basin occupies a swampy plain between the Ural Mountains and the Yenisey River. On the north, the basin extends offshore into the southern Kara Sea. On the west, north, and east, the basin is surrounded by the Ural, Yenisey Ridge, and Turukhan-Igarka foldbelts that experienced major deformations during the Hercynian tectonic event and the Novaya Zemlya foldbelt that was deformed in early Cimmerian (Triassic) time. On the south, the folded Caledonian structures of the Central Kazakhstan and Altay-Sayan regions dip northward beneath the basin's sedimentary cover. The basin is a relatively undeformed Mesozoic sag that overlies the Hercynian accreted terrane and the Early Triassic rift system. The basement is composed of foldbelts that were deformed in Late Carboniferous?Permian time during collision of the Siberian and Kazakhstan continents with the Russian craton. The basement also includes several microcontinental blocks with a relatively undeformed Paleozoic sedimentary sequence. The sedimentary succession of the basin is composed of Middle Triassic through Tertiary clastic rocks. The lower part of this succession is present only in the northern part of the basin; southward, progressively younger strata overlap the basement, so that in the southern areas the basement is overlain by Toarcian and younger rocks. The important stage in tectono-stratigraphic development of the basin was formation of a deep-water sea in Volgian?early Berriasian time. The sea covered more than one million km² in the central basin area. Highly organic-rich siliceous shales of the Bazhenov Formation were deposited during this time in anoxic conditions on the sea bottom. Rocks of this formation have generated...
