Excerpt from Branch of Research Monthly Report of Forest Experiment Stations, Forest Economics, Forest Products, Range Research: February, 1934 The initial phase of the range survey in the San Joaquin valley and foothills, to obtain data on erosion and rodents, was nearly completed during the month. The results must be compiled before conclusions can be drawn, but the men report general impressions of special interest, including the following. The areas of serious range erosion were observed chiefly in the grassland type, and more commonly at the lower elevations. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy.
