NANO-OPTICS FOR ENHANCING LIGHT-MATTER INTERACTIONS ON A MOLECULAR SCALE: PLASMONICS, PHOTONIC MATERIALS AND SUB-WAVELENGTH RESOLUTION

Springer. Paperback. Condition: New. 477 pages. Dimensions: 9.2in. x 6.1in. x 1.4in. This volume presents a considerable number of interrelated contributions dealing with the new scientific ability to shape and control matter and electromagnetic fields on a sub-wavelength scale. The topics range from the fundamental ones, such as photonic metamaterials, plasmonics and sub-wavelength resolution to the more applicative, such as detection of single molecules, tomography on a microchip, fluorescence spectroscopy of biological systems, coherent control of biomolecules, biosensing of single proteins,...

Reviews

This ebook is fantastic. It is actually written in straightforward terms rather than hard to understand. It has been designed in an extremely straightforward way and it is merely soon after I finished reading through this ebook through which in fact modified me, alter the way I really believe.

-- **Justice Wilderman**

This pdf is fantastic. It is really basic but excitement from the fifty percent in the book. Your lifestyle span will be change as soon as you full reading this publication.

-- **Yolanda Nicolas**

This publication could be worth a read through, and far better than other. This is certainly for all those who state there was not a worth reading through. You may like just how the author compose this publication.
