Though all its problems are, in truth, not yet solved; though many differences of opinion still exist; we have, nevertheless, a firm foundation of essentials in fact; concepts which demand and obtain universal acceptance. Since the induction by Olshausen of curetment, or abrasio mucosae, as a gynecologic operation, new and, in fact, hitherto entirely unsuspected paths have opened up in diagnosis and therapy. Scraping away the mucous membrane of the uterus permits a simple, sure recognition, comparatively without danger, of the structural composition of the inner lining of this organ. Diagnosis of the benign or malignant character of mucosal alteration is determinable; a cancer is early cognized; hemorrhage, deviating from normal occurrences, is etiologically referred to an endometritis or established as an obstetric phenomenon and sequela. Still, interpretation of the microscopic data afforded by curetage was not got in a day; only after years of tireless striving, chiefly under the leadership of Carl Ruge, and sequent to the determination and establishment of certain typical forms, was it possible to define more sharply the often vague lines of differentiation among the individual conditions and gather together data of the greatest import.
