## Geological Survey Professional Paper Volume 598

By Geological Survey

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. Excerpt: .when each of the channels was functional. Therefore, the hydrologic regimens of the prior-stream and the ancestral-river systems differed from one another and were different from that of the modern Murrumbidgee. CLASSIFICATION OF ALLUVIAL RIVER CHANNELS One of the stated objectives of this study was to obtain data to support the assumption that the silt-clay content of an alluvial river channel is dependent largely on the type of sediment load moved through the channel. Before proceeding with a detailed discussion of the adjustment of river channels to altered hydrologic regimen, it may be well to consider the validity of this assumption. Three types of channels were previously defined (Schumm, 1963a) according to the amount of silt-clay (M) present in the bed and bank sediment and were designated as suspended-load, mixed-load, and bedload Figure 24.--Relation between width-depth ratio and sinuosity. Regression line established from data from Great Plains...
