Excerpt from The St. Louis Medical and Surgical Journal, Vol. 63: July-December, 1892 Now let us examine the evidence adduced to support the possibility of auto-inoculation and then we will consider the probabilities. P. A. Morrow says, The initial lesion is unique multiple chancres are, however, by no means rare they may be grouped in the same region, or be disseminated over different portions of the body. Multiple chancres are almost always due to the simultaneous inoculation of a number of rents or abrasions; they are not produced by successive inoculation, as in the case of chancroid.
