Excerpt from An Elementary Arithmetic: Containing Extensive Exercises for the Slate In Simple Addition, 9. Large amount of practical work is presented for the scholar in his first efforts upon the slate. A peculiarity in this part of the system consists in adding by combination by which mental labor is much diminished, while increased expedition and accuracy are secured. This is a matter of practical importance, both in the school room, and the business operations of every-day life. A second peculiarity will be found in the application of the principle of Subtraction. After the introductory mental and slate exercises, a business application of the principle is introduced by natural and obvious gradations. The first consists in subtracting a single member from the amount of several numbers the second, in subtracting the amount of several numbers from a single member and the third, in subtracting the sum of several numbers from the amount of several others. These three distinct subdivisions, embrace every possible application of the principle of subtraction, and for each, specific directions, illustrations, and explanations are given; The same general system is carried out in the application of the other simple rules.
