

## Assessment of Forest condition at SUA-Kitulangalo forest reserve in Tanzania Miombo Woodland

By Paulo Lyimo

GRIN Verlag GmbH Jan 2015, 2015. Taschenbuch. Book Condition: Neu. 214x151x9 mm. This item is printed on demand - Print on Demand Neuware - Scholarly Research paper from the year 2015 in the subject Agrarian Studies, , course: BSc. forestry, language: English, abstract: There is high deforestation and forest degradation estimated to be 400,000ha per annum between 1990 and 2013 in Tanzania forests. This is due to the increase in wood demand for energy and for industrial raw materials. The study was conducted to assess forest condition of Sokoine University of Agriculture - Kitulangalo Forest Reserve (SUA KFR). A total of 52 nested circular plots with radii of 2, 5, 10, and 15 m were used to collect data such as diameter at breast height (DBH), height and number of regenerants. Parameters computed for data analysis were stem per ha (N), number of regenerants, dominant tree species, exotic species, basal area per ha (G) and volume (standing and removed) per ha (V). A total of 71 tree species were identified and recorded during inventory, the average 995±256 stems/ha of different tree species of various DBH class, the average basal area per ha,  $G=7.961268\pm 0.8$  m<sup>2</sup>/ha and the mean standing total volume,...
