SCREENING FOR OSTEOPOROSIS: SYSTEMATIC REVIEW TO UPDATE THE 2002 U.S. PREVENTIVE SERVICES TASK FORCE RECOMMENDATION: EVIDENCE SYNTHESIS NUMBER 77 (PAPERBACK)

Createspace, United States, 2013. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Osteoporosis is a systemic skeletal condition characterized by low bone mass and microarchitectural deterioration of bone tissue that increases bone fragility and risk for fractures. Osteoporosis may occur without a known cause, or secondary to another condition. These include corticosteroid therapy, excessive alcohol use, primary or secondary hypogonadism, low calcium intake, vitamin D deficiency, smoking, antiepileptic drug use, thyrotoxicosis, primary hyperparathyroidism, chronic liver or kidney disease, rheumatoid arthritis, diabetes, human immunodeficiency virus, organ transplantation, multiple myeloma, and others. Osteoporosis is diagnosed in individuals on the basis of presence of a fragility fracture or by bone mass measurement criteria. A fragility fracture results from forces that would not normally cause a fracture, such as a hip or wrist fracture from falling from standing height or a vertebral compression fracture. Although specific fracture sites have been considered more characteristic of osteoporosis, fractures occurring at nearly every anatomical site have been associated with osteoporosis. This systematic evidence review is an update for the U.S. Preventive Services Task Force (USPSTF) recommendation on screening for osteoporosis. In 2002, based on results of a previous review, the USPSTF recommended bone density screening for women age greater than or equal to 65 years and women age 60-64 years at increased risk for osteoporotic fractures. They made no recommendations for or against screening postmenopausal women age less than 60 years or women age 60-64 years without increased risk. Men were not considered in the prior recommendation. This update focuses on new studies and evidence gaps that were unresolved at the time of the 2002 recommendation. These include the effectiveness and harms of osteoporosis screening in reducing fractures and fracture-related health outcomes for men as well as postmenopausal women without known...
