Later writers have developed his principles analytically, and have extended the region of their application, but, in regard to the principles themselves, they have acted the part, of commentators. Nevertheless we may trace a tendency in modern investigations, which is of the nature of a gradual change in the point of view: there is less search for causes, more inclination to regard the object to be attained as a precise formulation of observed facts. On another side there is an important respect in which modern writers have departed from the form of the Newtonian theory. The philosophical dictum that all motion is relative stands in pronounced contradiction with Newton's dynamical apparatus of absolute time, absolute space, and absolute motion. It has been necessary to reconsider in detail the principles, and the results deduced from them, in order to ascertain what modification would be needed to bring the theory of Rational Mechanics founded by Newton into harmony with the doctrine of the relativity of motion. The purpose of this book is didactic; it is meant to set before students an account of the principles of Mechanics, which shall be as precise as possible, and which shall be in accordance with modern ideas. The class of students for whom the book is intended may be described as beginners in Mathematical Analysis. The reader is supposed to have a slight acquaintance with the elements of the Differential and Integral...
