RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 40 pages. Original publisher: Greenbelt, Md. : NASA Goddard Space Flight Center, 2000 OCLC Number: (OCoLC)82201783 Excerpt: . . . sphere. Light reflected from the reference without a sample and integrating sphere wall (transmitted here) was measured. The sample mount was placed back into the integrating sphere sample holder with the axial needle surface facing toward the inside of the sphere. Light transmitted through the axial surfaces was measured. The sample was turned so that the axial needle surfaces of the sample were facing the inside of the sphere. In addition, measurements followed: 1) light transmitted through the axial surfaces, 2) light reflected from the reference with the sample in place (axial reference), and 3) light reflected from the axial surfaces. After the entire suite of measurements was made, the sample mount was removed from the integrating sphere. The intended measured surface was painted with Testors (1149) black paint to the other side of the sample element. The sample mount was placed in the integrating sphere sample holder with the blackened surface facing away from the sphere. Light transmitted through the blackened sample was measured. After 20-Apr-1994: A modified set of procedures for optical property measurements described by Daughtry et al. (1989) was used. The sample mount was attached to a mask with an aperture the size of the illumination light source beam. This assembly was placed on the light table underneath an image analysis systems camera. The image was captured and the gap area measured by counting the number of whitish pixels. The area was ratioed to the total area of the incident beam (i.e., the area of the mask) to give the gap fraction (area of nonintercepted illumination beam). The sample was then placed in the integrating sphere sample holder and the suite of measurements, described above, was made. The measurement of the blackened sample was not made. Prior to 20-Apr-1994: To calculate the fraction of nonintercepted illumination beam, the painting technique. . . This item ships from La Vergne, TN. Paperback.
