

Magnetization Dynamics in Diluted Magnetic Semiconductor Heterostructures

By Martin Kneip

GRIN Verlag. Paperback. Condition: New. 280 pages. Dimensions: 8.3in. x 5.8in. x 0.9in. Doctoral Thesis Dissertation from the year 2008 in the subject Physics - Theoretical Physics, grade: sehr gut (1, 0), University of Dortmund, 550 entries in the bibliography, language: English, abstract: In this thesis spin dynamics in (Zn, Mn)Se(Zn, Be)Se and (Cd, Mn)Te(Cd, Mg)Te DMS quantum well heterostructures with a type-I band alignment are studied, where the carriers are quantum confined. Especially the important role of free carriers in heating of the Mn-system, by its interaction with photoexcited carriers with excess kinetic energy, and in the cooling of the Mn-system in the presence of cold background carriers, provided by modulation doping, is established. The studies are separated in three chapters. In the fourth chapter of this thesis, new results on energy and spin transfer between free carriers and Mn-ion system are presented. Contributions of direct heating of the Mn-system by photo carriers and indirect heating via nonequilibrium phonons are distinguished and their competition is discussed. In the fifth chapter dynamics of spin-lattice relaxation of magnetic Mn-ions in DMS QW heterostructures is investigated and new experimental studies on (Zn, Mn)Se(Zn, Be)Se heterostructures are shown. Crucial for spintronic devices is the ability...

Reviews

Complete guide! Its such a good go through. It is rally fascinating throggh reading period of time. Its been written in an extremely basic way and is particularly only after i finished reading through this publication through which really changed me, change the way i really believe.

-- **Mrs. Macy Stehr**

This publication is wonderful. I actually have go through and i am sure that i am going to going to study once more once more down the road. I am easily could get a enjoyment of studying a written book.

-- **Mozelle Halvorson**
