Forgotten Books, 2018. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Robotics Research Technical Report: Analysis of the Motion-Planning Problem for a Simple Two-Link Planar Arm Define the forearm PQ to be an oriented segment of length d_z , with elbow P . A placement of the arm is a pair where X is the position of P and θ is the orientation of pq . The free room V is the open polygonally bounded region given by room interior less the obstacles. A real wall is a boundary segment of V . The workspace F is the largest Open star shaped region with center at O contained in V . F is clearly polygonally bounded and is cut out of V by segments each originating at an obstacle corner and directed away from O . We refer to these segments as virtual walls; from now on wall will mean a real or virtual wall. Clearly, P must stay within F since the line-segment OP (the upper arm) must stay within V .
