

Nanocasting: A Versatile Strategy for Creating Nanostructured Porous Materials

By Dongyuan Zhao

Royal Society of Chemistry. Hardcover. Book Condition: New. Hardcover. 265 pages. Dimensions: 9.2in. x 6.2in. x 0.9in. Nanostructured materials with tailored properties are regarded as a fundamental element in the development of future science and technology. Research is still ongoing into the nanosized construction elements required to create functional solids. The recently developed technique, nanocasting, has great advantage over others in terms of the synthesis of special nanostructured materials by the careful choice of suitable elements and nanoengineering steps. This new book summarizes the recent developments in nanocasting, including the principles of nanocasting, syntheses of novel nanostructured materials, characterization methods, detailed synthetic recipes and further possible development in this area. The book focuses on the synthesis of porous solids from the viewpoint of methodology and introduces the science of nanocasting from fundamental principles to their use in synthesis of various materials. It starts by outlining the principles of nanocasting, requirements to the templates and precursors and the tools needed to probe matter at the nanoscale level. It describes how to synthesize nano structured porous solids with defined characteristics and finally discusses the functionalization and application of porous solids. Special attention is given to new developments in this field and future perspectives....

Reviews

A brand new e book with an all new point of view. I have got read and i am sure that i am going to read through once more once more in the future. It is extremely difficult to leave it before concluding, once you begin to read the book.
