

## General Atomics Avenger

By Frederic P. Miller

Alphascript Publishing. Taschenbuch. Condition: Neu. Neuware - The General Atomics Avenger is a developmental unmanned combat air vehicle built by General Atomics Aeronautical Systems for the United States military. Unlike the previous MQ-1 Predator and MQ-9 Reaper drones, the Avenger is powered by a jet engine, and its design includes stealth features such as internal weapons storage, and an 'S' shaped exhaust for reduced heat and radar signature. Its first flight occurred on 4 April 2009. The Avenger will support the same weapons as the MQ-9, and carry the Lynx Synthetic aperture radar SAR and a version of the F-35 Lightning II's electro-optical targeting system, called the Advanced Low-observable Embedded Reconnaissance Targeting system. The Avenger will use the same ground support infrastructure as the MQ-1 and MQ-9, including the ground control station and existing communications networks. 148 pp. Englisch.
