Excerpt from The Diagnosis of Diseases of the Brain, Spinal Cord, Nerves, and Their Appendages By the application of a true system of pathology, hygiene, and therapeutics, practical medicine is so directed that it does not interrupt the processes of nature, but assists their development, by placing the individual in the best circumstances for the accomplishment of their destined results. Little more than this can be either expected, or desired: but for the application of such a system the essential pre-requisite is diagnosis; understanding by that word the recognition of an individual case as belonging to a certain category of disease, the general laws of which form part of the systematic science; so that the particular case in question is thus known to have a certain probable issue, and to require a special kind of medicinal, general, and social treatment.
