

## Sonographic Survey of Female Breast in Sudanese Population

By Abdelaziz, Mai / Sulieman, Abdelmoneim

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Survey of Female Breast in Sudanese Population Using Medical Diagnostic Ultrasound | Breast ultrasound is an adjunct to mammography and physical examination for breast masses by confirming diagnosis of cysts and providing accurate guidance for needle biopsy of vast majority of solid masses. In Sudan the incidence of cancer has been increased in the last years, this may be due to the risk factors (familial, hormonal, iatrogenic and radiation). Objectives of the study are to differentiate between cystic and solid masses, to observe criteria for differentiation between benign and malignant masses and also to increase the clinicians awareness regarding the important role of ultrasound guidance in interventional procedures safely. | Format: Paperback | Language/Sprache: english | 92 pp.

### Reviews

*Here is the finest publication we have read right up until now. It is actually written in easy words instead of difficult to understand. It's been written in a remarkably easy way in fact it is only right after I finished reading this book in which basically changed me, modify the way I really believe.*

-- Prof. Vanessa Smitham V

*Very beneficial to any or all class of individuals. It is really interesting through looking at time. You will not feel monotony at any time of your time (that's what catalogs are for concerning in the event you question me).*

-- Dr. Dallas Reinger IV
