## Simulation and Optimisation of Parasitic Impedances and EMI Behaviour of New Power Electronic Hardware Concept (Paperback)

By Philipp Karutz

GRIN Publishing, 2017. Paperback. Condition: New. 1. Auflage. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Diploma Thesis from the year 2005 in the subject Electrotechnology, grade: 1,0, Otto-von-Guericke-University Magdeburg (Institut für Elektrische Energiesysteme (IESY)), language: English, abstract: This diploma thesis presents methods and results of the simulative characterization of the electromagnetic compatibility (EMC) behaviour of a new low voltage motor drive hardware concept. The concept consists of double side cooled discrete semiconductor packages, which are integrated in a new power stage hardware topology. The overall EMC behaviour of such a drive is characterized by the semiconductor properties and additionally by two main factors: package parasitics and electromagnetic emission. Firstly, the switching behaviour of the drive is influenced by package parasitics that can cause transient voltage peaks. These peaks do not only lead to increased electromagnetic emission, but also influence the power losses, the voltage de-rating and therefore the silicone usage within the package. The characterization of the package parasitics is therefore an important task within the design phase of the drive. The methods and results of the parasitics extraction and switching behaviour analysis of both the discrete semiconductor package (PP) and the new power stage hardware topology...
