HYDROGEN-BONDED SYSTEMS UNDER ELECTRIC FIELDS

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Computer simulations rule our lives nowadays. From the scientific perspective, they allow for the knowledge of the most intimate details of matter at a sub-atomic (quantum) level both at a molecular and macroscopic level. When Hydrogen-bonded systems are subject to the action of strong electric fields, peculiar phenomena occur. These have a huge impact in our daily lives since, on one hand, most of the biochemical processes occur in water environments and in the presence of local electric fields and, on the other hand, many technological devices exploit molecular dissociation and proton transfer in order to produce "clean" energy from simple compounds (i.e., molecular hydrogen, methanol, etc.). Through the most advanced computing facilities, the full treatment of the fundamental field-induced processes of molecular dissociation and proton transfer is nowadays affordable and has led to draw a defined sketch of these phenomena with a molecular resolution, a fact almost unthinkable up to few years ago. | Format: Paperback | Language/Sprache: english | 176 gr | 220x150x6 mm | 120 pp.
