 Development of vibration based method
 to distinguish support looseness and crack on a cantilever beam

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | to distinguish support looseness and crack on a cantilever beam | Due to highly competitive global markets, the breakdown of gas turbine is the single biggest operating parameters in terms of production loss, repair cost, and safety. Blade failure is regarded as one of the most critical problems on gas turbine and always causes critical failure. Consequently, the early faults detection of blade damage becomes more attractive to many developers to improve...
