

Sibley-Ahlquist Taxonomy of Birds

By Lambert M. Surhone

Betascript Publishers Dez 2009, 2009. Taschenbuch. Condition: Neu. Neuware - Please note that the content of this book primarily consists of articles available from Wikipedia or other free sources online. The Sibley-Ahlquist taxonomy is a radical bird taxonomy proposed by Charles Sibley and Jon Edward Ahlquist. It is based on DNA-DNA hybridization studies conducted in the late 1970s and throughout the 1980s. DNA-DNA hybridization is among a class of comparative techniques in molecular biology that produce distance data (versus character data) and that can be analyzed to produce phylogenetic reconstructions only using phenetic tree-building algorithms. In DNA-DNA hybridization, the percent similarity of DNA between two species is estimated by the reduction in hydrogen bonding between nucleotides of imperfectly complemented heteroduplex DNA, (i.e., double stranded DNAs that are experimentally produced from single strands of two different species) compared with perfectly matched homoduplex DNA (both strands of DNA from the same species). 64 pp. Englisch.

Reviews

Extensive information for book fanatics. Better than never, though I am quite late in start reading this one. I am just delighted to tell you that this is basically the best pdf I actually have go through within my personal daily life and might be the greatest pdf for actually.

-- **Guillermo Marquardt**

This kind of publication is every little thing and taught me to searching in advance plus more. I have got study and I am confident that I am going to going to go through yet again again down the road. I am just effortlessly could get a delight of reading a written pdf.
