A MANUAL OF PRACTICAL ANATOMY, VOL. 2 OF 3: THE ABDOMEN AND THORAX (CLASSIC REPRINT) (PAPERBACK)

Forgotten Books, United States, 2016. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from A Manual of Practical Anatomy, Vol. 2 of 3: The Abdomen and Thorax For three days at least the body lies face downwards on the table, its pelvic part propped up by blocks, and the thighs extended from the end of the table. During this period the dissectors of the abdomen have to examine two regions - the lumbar and the ischio-rectal of the perineum. Both are parts of the utmost practical importance. They have to work with, and assist, both the dissectors of the upper and lower extremities - to some extent at least. The lumbar region (fig. 117) is that part of the body which lies between the twelfth rib above and the crest of the ilium below. Its width varies with the proximity of the rib to the crest of the ilium; the distance between them is usually about two and a half inches.
