Contentowners (e.g., movie studios and recording companies) have identified two major technologies for the protection of multimedia data: encryption and watermarking. Encryption is a procedure that renders the contents of a multimedia element unintelligible to unauthorized people. Digital watermarking has received increasing attention in recent years. Image watermarking is the process of embedding an invisible watermark in an image in order to make it very difficult to remove the watermark after intentional attacks and normal audio/visual processes. Distribution of movies, music, and images is now faster and easier via computer technology, especially on the Internet. | Format: Paperback | Language/Sprache: english | 260 gr | 220x150x10 mm | 188 pp.
