Fastbook Publishing Dez 2012, 2012. Taschenbuch. Condition: Neu. Neuware - Please note that the content of this book primarily consists of articles available from Wikipedia or other free sources online. The NASA scientists have recently conducted various experiments which have shown that if a liquid is kept levitated then left to cool and solidify, its physical structure may end up quite different from the same material cooled in an ordinary container. Indeed, this is because the drop has suspended in mid-air has no contact with a surface that can trigger crystallisation. The research of the scientific experiences has as aim to prove to power and effect of levitation. Here, the analysts have found that instead of solidifying in its usual crystal structure, the compound is more likely to freeze as an amorphous material. As a matter of fact, the field of science and research was found to have made one more step towards discovery. This new technology which have been invented by the NASA team can help lower drug doses by changing the physical structure at which they solidify. In-depth research have demonstrated that the new technological invention is based on acoustic levitation. 80 pp. Englisch.
