Hachette Australia, 2015. Paperback. Book Condition: New. 1. 15.3 x 23.2 cm. Almost, but not quite human, the yeti and its counterparts from wild regions of the world, still exert a powerful atavistic influence on us. Is the yeti just a phantasm of our imagination, or is it a real creature? A survivor from our own savage ancestry? This is the mystery that Bryan Sykes set out to unlock. Three hair samples from the remote Himalayan kingdom of Bhutan are the cause of the investigation. The hair samples were from the miogi, the Bhutanese yeti, that legendary creature of the high snows that has haunted the imagination of travellers for centuries. Professor Sykes was asked to identify the hairs using DNA analysis. The miogi hairs did not surrender their secrets easily, but eventually two were identified as known species of bear. The third remained a mystery. Ten years later two scientific developments caused the miogi to enter Professor Sykes' thoughts again. The first, a purely technical improvement, meant that it was now possible to get a very good DNA signal from a single hair. The second development came from the surprising conclusion of an article published in 2010. This paper contained the details of the DNA sequence from another human species, *Homo neanderthalensis*, the Neanderthals, widely thought to be extinct. One of the many theories to account for the yeti legend is that there were small groups of Neanderthals that had managed to survive until recent times, or maybe even until the present day. If so, would it be possible to detect recent interbreeding between our own species and Neanderthals in the genomes of indigenous people living in remote regions. Locations where the yeti legends are strongest and the sightings most numerous? Professor Sykes set a goal to locate and analyse as...
