Brand New Book ***** Print on Demand *****.The U.S. Geological Survey (USGS) aims to provide unbiased scientific information to describe and understand the geological processes of the Earth; minimize loss of life and property from natural disasters; manage water, biological, energy, and mineral resources; and enhance and protect the nation s quality of life. The USGS is a scientific agency that is housed within the Department of the Interior. Its primary mission is conducting science; it has no regulatory authority, nor does it manage any significant federal lands. The USGS also collects and stores scientific information that is compiled into long-term continuous data sets. These data sets range from satellite imagery of land and ecosystem features to streamflow data on major rivers and streams. The USGS conducts scientific activities under seven interdisciplinary mission areas: (1) water resources; (2) climate and land use change; (3) energy and minerals; (4) natural hazards; (5) core science systems; (6) ecosystems; and (7) environmental health. The agency is funded through Interior, Environment, and Related Agencies appropriations laws. The FY2015 budget request for the USGS was \$1.07 billion, which is \$41.3...
